TECHNOVA SOLUTIONS PVT. LTD.
ASSET MANAGEMENT

Document ID	TN-OPS-POL-004
Document Type	Operations / Asset Management Policy
Document Owner	Operations Department
Approving Authority	Chief Operating Officer / Managing Director
Classification	Internal — Operations
Version	1.0
Effective Date	01 April 2026
Review Cycle	Annual
Status	Active
Supersedes	New Policy

1. Purpose

This Asset Management policy establishes the controls TechNova Solutions Pvt. Ltd. (“TechNova” or “the Company”) uses to identify, acquire, assign, protect, maintain, track, transfer, recover, and dispose of Company assets.

The objective is to maintain accurate asset accountability, support operational continuity, protect Company information, reduce loss and misuse, and ensure assets are managed throughout their useful lifecycle.

2. Scope

This policy applies to physical and logical assets owned, leased, rented, assigned, or otherwise controlled by TechNova, including assets used by employees, contractors, offices, and operational teams.

- Laptops and desktop computers
- Mobile devices and tablets
- Servers and network equipment
- Peripherals and accessories
- Office and facility equipment
- Software licenses and subscriptions
- Cloud and hosted resources
- Company information stored on assets
- Other assets designated as controlled resources

3. Asset Management Principles

- Every controlled asset must have an accountable owner or custodian.
- Asset records must be accurate and maintained throughout the lifecycle.
- Assets must be used for authorized business purposes.
- Information-bearing assets must receive appropriate security protection.
- Access and assignment must reflect business need.
- Transfers and disposals must be authorized and documented.

- Lost, stolen, damaged, or unaccounted assets must be reported promptly.

4. Asset Categories

Category	Examples	Typical Control
End-user devices	Laptops, desktops, monitors, mobile devices	Assignment, inventory, security configuration, return
IT infrastructure	Servers, network equipment, appliances	Ownership, location, configuration, maintenance
Software	Applications, licenses, subscriptions	License ownership, renewal, access and usage
Facilities	Furniture, equipment, access-related equipment	Custody, location, maintenance
Specialized equipment	Engineering, testing, operational equipment	Custody, calibration or maintenance where applicable

5. Asset Ownership

The Company retains ownership of Company-provided assets unless a written agreement states otherwise. Employees and contractors are custodians when assets are assigned to them.

Custodians are responsible for reasonable care and must follow security, acceptable-use, and operational requirements.

6. Asset Register

Controlled assets should be recorded in the approved asset-management or inventory system.

- Asset identifier
- Asset type
- Make/model where applicable
- Serial number or unique identifier
- Assigned user or custodian
- Department
- Location
- Status
- Acquisition or assignment date
- Warranty or support information where applicable

7. Asset Identification

Assets requiring individual accountability should have a unique identifier or other reliable means of identification. Labels must not expose unnecessary sensitive information.

8. Asset Assignment

Assets may be assigned based on role, business need, approved request, and available inventory.

- Record the assignment.
- Confirm recipient or custodian.
- Record relevant condition at handover.
- Provide applicable usage and security instructions.
- Require acknowledgement where the process calls for it.

9. Employee Responsibilities

- Protect assigned assets against loss, theft, damage, and unauthorized use.

- Use assets according to Company policies.
- Keep assigned devices physically secure.
- Report loss, theft, or damage promptly.
- Return assets when requested or at separation.

10. Manager Responsibilities

Managers should ensure asset assignments are justified, current, and returned or reassigned when an employee changes role, leaves the Company, or no longer requires the asset.

11. Operations Responsibilities

- Maintain asset records.
- Coordinate procurement and allocation with relevant functions.
- Track transfers and returns.
- Coordinate maintenance and repair.
- Support periodic inventory verification.
- Coordinate disposal and lifecycle closure.

12. Engineering and IT Responsibilities

Technical teams are responsible for appropriate configuration, maintenance, security controls, and technical lifecycle management of technology assets within their scope.

13. Information Security Responsibilities

Information Security establishes or advises on security requirements for assets that process, store, transmit, or provide access to Company information.

14. Procurement and Acquisition

Asset acquisition must follow applicable procurement and approval requirements.

- Define business need.
- Obtain required approvals.
- Select an appropriate asset or service.
- Record ownership and expected lifecycle.
- Register the asset after receipt.

15. Receiving Assets

New assets should be inspected on receipt and matched against purchase or supplier documentation where appropriate.

- Verify quantity.
- Verify model or specification.
- Record serial/unique identifiers.
- Record condition.
- Register the asset.
- Escalate discrepancies.

16. Asset Condition

Assets should be maintained in a condition suitable for safe and effective use. Material damage, defects, or unsafe conditions must be reported.

17. Maintenance and Repairs

Maintenance and repairs should be performed by authorized personnel or approved service providers.

Where an asset contains Company information, data-protection and security requirements must be considered before sending it for repair.

18. Warranty and Support

Warranty and support details should be retained where they are necessary for operational management. Service owners should track material support expiration dates for critical assets.

19. Asset Transfers

Transfers between employees, departments, locations, or service owners must be documented.

- Current custodian
- New custodian
- Transfer date
- New location if relevant
- Condition where relevant
- Required system or access changes

20. Temporary Loans

Temporary asset loans must have a defined custodian and expected return date where practical. Loaned assets remain subject to Company security and acceptable-use requirements.

21. Remote and Home Use

Company assets used outside Company facilities must remain protected against theft, unauthorized access, damage, and accidental disclosure.

- Use secure physical storage.
- Do not leave devices unattended in exposed locations.
- Use approved network and access controls.
- Report loss or theft immediately.

22. Travel with Assets

Employees traveling with Company assets must take reasonable precautions and comply with applicable security and travel requirements.

High-risk travel or movement of sensitive equipment may require additional controls.

23. Asset Security

- Screen lock and authentication
- Encryption where required
- Endpoint protection
- Security updates
- Least-privilege access

- Approved software
- Secure network access

24. Software Assets

Software licenses, subscriptions, and installed applications must be appropriately authorized and tracked where licensing or security requirements apply.

Employees must not install unauthorized software that creates security, licensing, compatibility, or operational risk.

25. Cloud and Hosted Assets

Cloud resources and hosted services should have an accountable owner, appropriate access controls, and lifecycle management. Unused resources should be reviewed and decommissioned when no longer required.

26. Configuration and Ownership

Technology assets should have clearly defined technical ownership. Material configuration information should be maintained in approved systems where required for support and recovery.

27. Asset Inventory Verification

Operations or designated asset owners should periodically verify inventory records against actual assets.

- Confirm assigned custodian.
- Confirm physical or logical location.
- Identify missing assets.
- Identify unrecorded assets.
- Correct inaccurate records.
- Escalate unresolved discrepancies.

28. Asset Reconciliation

Inventory discrepancies must be investigated proportionately to risk. Reconciliation should distinguish legitimate transfers, pending returns, disposal records, and genuinely missing assets.

29. Lost Assets

Lost assets must be reported promptly to the appropriate manager and Operations. If the asset contains or provides access to Company information, the incident must also be escalated according to applicable security procedures.

Technical controls such as remote lock, access revocation, or device disablement may be applied where appropriate.

30. Stolen Assets

Theft must be reported immediately. Personnel should follow local safety and reporting requirements and must not place themselves at risk attempting to recover an asset.

31. Damaged Assets

Damage should be reported promptly. The Company may determine whether an asset should be repaired, replaced, retired, or otherwise handled based on condition and cost.

32. Asset Misuse

Suspected intentional misuse, unauthorized transfer, concealment, or deliberate damage may be investigated and may result in corrective or disciplinary action.

33. Data on Assets

Information stored on assets remains Company information where applicable and must be protected according to data classification, access-control, retention, and security requirements.

34. Data Removal Before Transfer

Before reassignment, repair return, or disposal, Company information must be securely removed or otherwise protected using approved procedures appropriate to the asset and information sensitivity.

35. Employee Separation

When an employee or contractor leaves the Company, assigned assets must be identified and returned as part of the exit process.

- Laptop/desktop
- Mobile device
- Accessories
- Storage media
- Physical equipment
- Other controlled property

36. Role or Department Change

Asset assignments should be reviewed when an employee changes role, department, location, or working arrangement. Assets no longer required should be returned or reassigned.

37. Asset Return

Returned assets should be inspected and recorded. The condition and completeness of the returned asset should be documented where material.

38. Return Delays

Unreturned assets should be escalated through the responsible manager and Operations. Additional actions may be taken according to applicable employment, contractual, or legal requirements.

39. Disposal

Assets reaching end of life or becoming uneconomical or unsuitable for use should be disposed of through an approved process.

- Confirm business owner approval.
- Remove or securely destroy Company data.
- Verify licensing or ownership implications.
- Use authorized disposal or recycling channels.
- Record disposal date and method.

40. Secure Disposal of Information

Storage media and information-bearing equipment must not be discarded until applicable information has been securely erased or the media has been destroyed using an approved method.

41. Environmentally Responsible Disposal

Where practical and appropriate, electronic equipment should be disposed of through authorized recycling or environmentally responsible channels.

42. Asset Retirement

Retired assets should be marked as retired in the asset register and removed from active assignment, access, monitoring, or operational dependencies as appropriate.

43. Financial Records

Assets with financial accounting implications must be handled consistently with Finance requirements, including capitalization, depreciation, impairment, disposal, and supporting records where applicable.

44. Asset Procurement Controls

Asset procurement must follow the Company's procurement and approval requirements. Purchases should not be split or structured to bypass approval thresholds.

45. Supplier Handling

When suppliers receive Company assets for repair, maintenance, or other services, the transfer should be authorized and tracked. Sensitive information must be protected before transfer.

46. Third-Party Assets

Third-party assets used by TechNova may be subject to contractual and security requirements. Their custody and use should be documented where the risk or agreement requires it.

47. Critical Assets

Assets supporting critical business services should receive appropriate continuity, maintenance, monitoring, backup, and replacement planning.

48. Spare Assets

Spare or standby equipment should be tracked as inventory and protected from unauthorized use. Its status should remain current.

49. Inventory Locations

Storage locations for assets should be controlled appropriately. High-value or sensitive assets should receive additional physical protection based on risk.

50. Physical Security

- Control access to storage areas.
- Secure devices outside working hours where appropriate.
- Do not leave sensitive equipment in publicly accessible areas.
- Report suspicious activity or unauthorized access.

51. Access to Technology Assets

Access to technology assets must follow applicable identity and access-control requirements. Asset possession alone does not authorize access to Company systems or information.

52. Asset and Access Correlation

When a device or other asset is assigned or recovered, relevant access records should be updated where required. Departed users and reassigned devices must not retain unnecessary access.

53. Asset Monitoring

Where monitoring is implemented, it should support security, operational, inventory, or compliance objectives and be performed consistently with applicable privacy and Company requirements.

54. Audit and Compliance

Asset records and supporting evidence may be reviewed as part of internal controls, security assessments, financial audits, operational reviews, or investigations.

55. Asset Exceptions

Exceptions to standard asset controls must be authorized by the appropriate owner and documented when they create material operational, security, financial, or compliance risk.

56. Incident Escalation

Asset-related incidents that affect security, confidentiality, availability, safety, or business continuity must be handled under the applicable incident-response and continuity processes.

57. Asset Risk Management

- Identify high-value or critical assets.
- Assess loss or failure impact.
- Prioritize controls according to risk.
- Maintain appropriate replacement or recovery options.
- Review recurring asset incidents.

58. Prohibited Practices

- Removing Company assets without authorization.
- Transferring assets without updating accountability records.
- Installing unauthorized software that creates material risk.
- Discarding information-bearing assets through ordinary waste channels.
- Concealing lost, stolen, or damaged assets.
- Using Company assets for unauthorized activity.

59. Governance

The Operations Department owns this policy and coordinates its annual review. Changes to asset-management systems, organizational responsibilities, security requirements, procurement processes, or business operations may require an interim review.

60. Frequently Asked Questions

Who is responsible for an assigned laptop?

The assigned employee is the custodian and must protect and use the laptop according to Company requirements.

What should I do if I lose a Company device?

Report it promptly to the appropriate manager and Operations; escalate security implications immediately where applicable.

Can I give my laptop to another employee?

No. Transfers should be authorized and recorded so accountability remains accurate.

What happens when I leave the Company?

Assigned Company assets must be returned and processed as part of the exit procedure.

Can I install software on a Company computer?

Only software permitted by applicable Company and technical controls should be installed.

What happens before a device is disposed of?

Company information must be securely removed or the storage media appropriately destroyed before disposal.

Are cloud resources assets?

Yes. Cloud and hosted resources should have accountable ownership and lifecycle management.

Why are asset inventories reconciled?

To identify missing, unrecorded, incorrectly assigned, or outdated assets and maintain reliable accountability.

What if an asset is damaged?

Report the damage promptly so Operations can determine repair, replacement, retirement, or other appropriate action.

Do spare devices need to be tracked?

Yes. Spare or standby equipment remains Company inventory and should have an accurate status.
