TECHNOVA SOLUTIONS PVT. LTD.
OPERATIONS HANDBOOK

Document ID	TN-OPS-HBK-001
Document Type	Operations Handbook
Document Owner	Operations Department
Approving Authority	Chief Operating Officer / Managing Director
Classification	Internal — Operations
Version	1.0
Effective Date	01 April 2026
Review Cycle	Annual
Status	Active
Supersedes	New Handbook

1. Purpose

The Operations Handbook establishes the principles, responsibilities, practices, and operating expectations used to manage TechNova Solutions Pvt. Ltd. (“TechNova” or “the Company”) in a consistent, controlled, and service-oriented manner.

It provides a common operating framework while allowing individual teams to maintain detailed procedures appropriate to their services, systems, facilities, and responsibilities.

2. Scope

This handbook applies to teams and personnel involved in day-to-day business operations, service delivery, facilities coordination, operational support, business processes, vendor coordination, incident handling, asset usage, continuity activities, and operational governance.

- Detailed requirements in approved departmental policies remain authoritative where they provide more specific controls.

3. Operations Principles

- Operate safely, reliably, and with clear accountability.
- Prioritize continuity of critical business services.
- Use documented and repeatable processes for important activities.
- Maintain accurate operational records.
- Escalate risks and incidents promptly.
- Protect Company information, assets, people, and facilities.
- Measure meaningful operational outcomes.
- Continuously improve processes based on evidence and lessons learned.

4. Operations Organization

Area	Typical Responsibility
Business Operations	Coordinate recurring operational processes, service delivery, and cross-functional execution.
Facilities / Administration	Support workplaces, physical resources, suppliers, and administrative services.

Area	Typical Responsibility
Service Operations	Maintain operational readiness and coordinate service support.
Operations Management	Set priorities, monitor performance, resolve escalations, and coordinate cross-functional issues.
Business Owners	Define service expectations, risks, controls, and operational requirements.

5. Operational Accountability

- Document the accountable owner.
- Define backup ownership for critical processes.
- Maintain current procedures.
- Track significant operational risks.
- Escalate unresolved issues.

6. Standard Operating Procedures

- Purpose and scope
- Required inputs
- Steps or workflow
- Roles and approvals
- Expected outputs
- Exception handling
- Escalation path
- Records to retain

7. Daily Operations

- Review outstanding work and operational priorities.
- Check important service or facility indicators.
- Address scheduled activities and known dependencies.
- Record material exceptions.
- Escalate issues that cannot be resolved within the team's authority.

8. Operational Planning

- Operational planning should consider demand, capacity, dependencies, staffing, suppliers, facilities, technology, risks, and continuity requirements.
- Material operational changes should be communicated to affected stakeholders before implementation where practical.

9. Service Ownership

- Service purpose
- Business owner
- Operational owner
- Dependencies
- Support arrangements
- Availability or service expectations

- Escalation contacts
- Recovery considerations

10. Operational Metrics

- Volume and throughput
- Timeliness
- Error or defect rates
- Incident frequency
- Backlog
- Availability or service performance
- Supplier performance
- Customer or internal stakeholder feedback

11. Operational Reviews

- Review current performance.
- Review significant incidents and recurring issues.
- Review open risks and actions.
- Review capacity and upcoming demand.
- Confirm ownership and documentation.
- Track improvement actions to completion.

12. Communication

- Use approved communication channels.
- Identify the issue, impact, owner, and next action.
- Escalate material issues rather than allowing them to remain unresolved in informal channels.
- Keep stakeholders informed when service impact changes.

13. Escalation

- Operational owner
- Operations management
- Technology or Engineering
- Information Security
- HR
- Finance
- Legal or executive management, as applicable

14. Incident Awareness

- Operational personnel must recognize and report incidents affecting people, facilities, information, technology, suppliers, or critical business services.
- Detailed response procedures are governed by Incident Response and applicable specialized procedures.

15. Incident Prioritization

Priority	General Description
P1 — Critical	Severe impact to a critical business service, safety, security, or major operations.
P2 — High	Significant service or operational impact requiring prompt coordinated action.
P3 — Medium	Limited impact with an available workaround or manageable operational effect.
P4 — Low	Minor issue with limited operational impact.

16. Business Continuity

- Identify critical activities.
- Identify minimum operating requirements.
- Identify key people and backups.
- Identify critical suppliers and dependencies.
- Maintain recovery and communication arrangements.
- Participate in continuity exercises where required.

17. Operational Risk Management

- Process failure
- Supplier dependency
- Capacity constraints
- Single points of failure
- Facility disruption
- Technology dependency
- Data or information loss
- Human error

18. Risk Escalation

- Material operational risks must be escalated to the appropriate owner or management authority. Risk acceptance should be explicit where the risk cannot immediately be eliminated.

19. Change Management

- Define the change and reason.
- Assess impact and dependencies.
- Identify implementation owner.
- Plan validation and rollback where applicable.
- Communicate expected impact.
- Record completion and lessons learned.

20. Operational Readiness

Before a new service, facility, supplier, process, or material system change becomes operational, the responsible owner should confirm that appropriate support, documentation, access, monitoring, training, and contingency arrangements are available.

21. Handover

- Current status
- Open issues
- Upcoming deadlines
- Known risks
- Key contacts
- Required credentials or access through approved channels
- Relevant procedures and records

22. Shift and On-Call Handover

- Handovers should identify unresolved incidents, service conditions, planned work, risks, and actions requiring follow-up.

23. Facilities Operations

- Access arrangements
- Safety checks
- Maintenance coordination
- Vendor coordination
- Emergency contacts
- Facility incidents
- Workspace readiness

24. Workplace Safety

- Do not knowingly bypass safety controls.
- Report hazards promptly.
- Follow emergency instructions.
- Keep emergency routes and equipment accessible.
- Participate in required safety training.

25. Physical Access

- Use assigned access credentials.
- Do not share access cards or credentials.
- Report lost access devices.
- Follow visitor procedures.
- Escort visitors where required.

26. Visitors and Contractors

- Visitors and contractors should be registered or otherwise managed according to applicable facility requirements.
- Access should be limited to areas and duration necessary for the approved purpose.

27. Operational Vendors

- Monitor material service performance.
- Record significant service failures.
- Review recurring problems.

- Escalate material supplier risk.
- Coordinate contract or renewal decisions with Procurement.

28. Supplier Performance

- Critical suppliers should be periodically reviewed against agreed service levels, quality, responsiveness, continuity, security, and commercial expectations where relevant.

29. Procurement in Operations

- Operational purchases must follow the Procurement Policy and Approval Matrix.
- Operations personnel must not create supplier commitments outside authorized purchasing processes.

30. Expense Management

- Operational expenses must comply with the Expense Policy and Reimbursement Policy. Employees must maintain appropriate evidence and approvals.

31. Asset Management

- Maintain accurate asset records.
- Report loss or damage promptly.
- Do not transfer assets informally.
- Follow approved disposal procedures.

32. Operational Inventory

- Define responsible owner.
- Record receipts and issues where required.
- Perform periodic reconciliation.
- Investigate material discrepancies.
- Protect inventory from unauthorized use.

33. Records and Documentation

- Maintain current procedures.
- Record significant decisions.
- Retain incident and operational evidence as required.
- Use approved storage locations.
- Apply applicable retention requirements.

34. Information Handling

Operational teams may handle confidential business, employee, customer, supplier, or technical information. Such information must be accessed and shared only for legitimate business purposes.

- Information Security Policy and Access Control Policy requirements apply to operational information handling.

35. Operational Access

- Use individual accounts where practical.
- Do not share passwords.
- Request access through approved channels.

- Remove access when no longer required.
- Report suspected unauthorized access.

36. Monitoring

- Critical operational activities may be monitored using approved logs, dashboards, alerts, inspections, service reports, or other operational controls.
- Monitoring should support service reliability, security, compliance, and continuous improvement.

37. Maintenance

- Define maintenance scope.
- Identify expected impact.
- Notify affected stakeholders.
- Use appropriate approvals.
- Validate service after maintenance.

38. Preventive Maintenance

- Critical equipment, facilities, and operational systems should receive preventive maintenance appropriate to their risk and manufacturer or service requirements.

39. Capacity Management

- People and staffing
- Facilities
- Equipment
- Supplier capacity
- Technology resources
- Process throughput

40. Operational Quality

- Measure meaningful quality indicators.
- Investigate repeated errors.
- Identify root causes where practical.
- Implement preventive controls.
- Verify corrective actions.

41. Root Cause and Corrective Action

- Describe the problem.
- Identify contributing factors.
- Determine corrective action.
- Assign an owner and target date.
- Verify effectiveness.

42. Business Process Controls

- Authorization

- Verification
- Reconciliation
- Segregation of duties
- Exception handling
- Audit trail

43. Operational Reconciliation

- Where operational records must agree with financial, inventory, service, or system records, periodic reconciliation should be performed at an appropriate frequency.

44. Data Accuracy

- Operational decisions depend on accurate information. Teams should validate important records, correct identified errors, and avoid knowingly using stale or unreliable information.

45. Operational Security

- Follow security procedures.
- Protect credentials and access devices.
- Report suspicious activity.
- Do not install or connect unauthorized equipment to Company environments.
- Follow secure disposal requirements.

46. Emergency Response

- In emergencies, personnel should prioritize safety and follow established emergency procedures. Operational continuity actions should be initiated only when safe and authorized.
- Material emergencies must be escalated through appropriate response channels.

47. Crisis Communication

- State confirmed facts.
- Identify current impact.
- State actions underway.
- Identify next update or responsible owner where applicable.
- Avoid speculation presented as fact.

48. Continuity Exercises

- Critical operational teams may participate in business-continuity exercises, simulations, or recovery tests.
- Exercise findings should be documented and converted into actionable improvements.

49. Operational Training

- Process-specific training
- Safety training
- Security awareness
- System or tool training
- Emergency procedures

50. Cross-Functional Coordination

Operations frequently depend on Engineering, HR, Finance, Administration, Procurement, Information Security, and other teams. Teams should define clear handoffs, responsibilities, escalation routes, and service expectations for important cross-functional processes.

51. Meetings and Operating Cadence

- Daily operational coordination where required
- Periodic service review
- Risk review
- Supplier review
- Incident review
- Improvement review

52. Operational Documentation

Documentation should be maintained at a level that enables continuity when personnel change, processes evolve, or incidents occur. Outdated documentation should be corrected or clearly marked as obsolete.

53. Knowledge Transfer

- Document critical procedures.
- Maintain backup ownership.
- Cross-train appropriate personnel.
- Record important operational decisions.

54. Remote Operations

Personnel working remotely must maintain appropriate communication, information security, availability, and operational responsibilities. Remote work does not remove obligations to protect Company information, assets, or service continuity.

55. External Communication

- Only authorized personnel may make external statements on behalf of TechNova concerning operational incidents, customers, suppliers, security events, or other Company matters.

56. Confidential Operational Information

Operational plans, supplier pricing, incidents, security information, facility details, internal metrics, and other non-public information must be shared only with authorized recipients.

57. Audit and Compliance

Operations may be subject to internal reviews, audits, contractual requirements, and applicable legal or regulatory obligations. Personnel must cooperate with authorized reviews and preserve relevant records.

58. Operational Exceptions

Where an operational process cannot be followed, the exception should be documented, the risk assessed, and an appropriate authority consulted. Repeated exceptions should trigger process review.

59. Continuous Improvement

- Identify avoidable work and recurring failure points.

- Use incident and performance data to prioritize improvements.
- Automate repetitive tasks where appropriate.
- Review whether controls remain effective.
- Share lessons learned across teams.

60. Process Change and Improvement

Improvements should consider business value, operational risk, implementation effort, dependencies, training, documentation, and continuity. Changes to systems or technology must also follow applicable Engineering and security controls.

61. Operational Handover During Employee Exit

When an employee leaves or changes role, critical operational responsibilities, records, assets, access, and open actions must be handed over through an approved process. Access must be updated or revoked according to applicable Access Control requirements.

62. Performance and Accountability

- Operational performance should be evaluated using agreed responsibilities, service outcomes, quality, reliability, responsiveness, and improvement contributions as appropriate.

63. Ethical Conduct

- Operations personnel must act honestly, avoid conflicts of interest, protect Company resources, and report suspected misconduct or control failures through appropriate channels.

64. Prohibited Operational Practices

- Bypassing safety or security controls
- Creating unauthorized supplier commitments
- Falsifying operational records
- Concealing material incidents
- Sharing credentials
- Removing or destroying required records
- Using Company assets for unauthorized purposes
- Knowingly operating a critical process without required controls

65. Operational Risk Escalation

Immediately escalate issues involving serious safety concerns, significant security incidents, major service disruption, material financial exposure, regulatory concerns, or risks that exceed local authority.

66. Governance

The Operations Department owns this handbook and reviews it at least annually or when material changes occur in organizational structure, critical services, facilities, operational processes, or Company requirements.

The latest approved version maintained in the official Company repository is the authoritative version.

67. Frequently Asked Questions

What is the purpose of the Operations Handbook?

It provides a common operating framework for reliable, controlled, and consistent business operations.

Does this handbook replace detailed policies?

No. More specific approved policies and procedures remain authoritative for their subject areas.

Who owns an operational process?

Each important process should have a designated accountable owner.

What should I do when I discover a serious operational issue?

Protect people and critical services first, then escalate promptly through the applicable response channel.

How should operational incidents be prioritized?

Priority should reflect business, service, safety, security, and operational impact.

Can I bypass a procedure during an emergency?

Only where necessary and safe, using the approved emergency process and documenting the circumstances afterward.

Who handles critical incidents?

The appropriate incident-response and operational roles coordinate according to Incident Response requirements.

How should suppliers be managed?

Material suppliers should have owners, service expectations, monitoring, escalation, and appropriate procurement and contractual controls.

What happens when an employee leaves?

Critical responsibilities, information, assets, and access must be handled through approved exit and access-control processes.

How often should operations improve their processes?

Continuous improvement should be ongoing, with formal reviews appropriate to service criticality and risk.
